

Transforming Records Management with SharePoint & Office 365

April 23, 2018

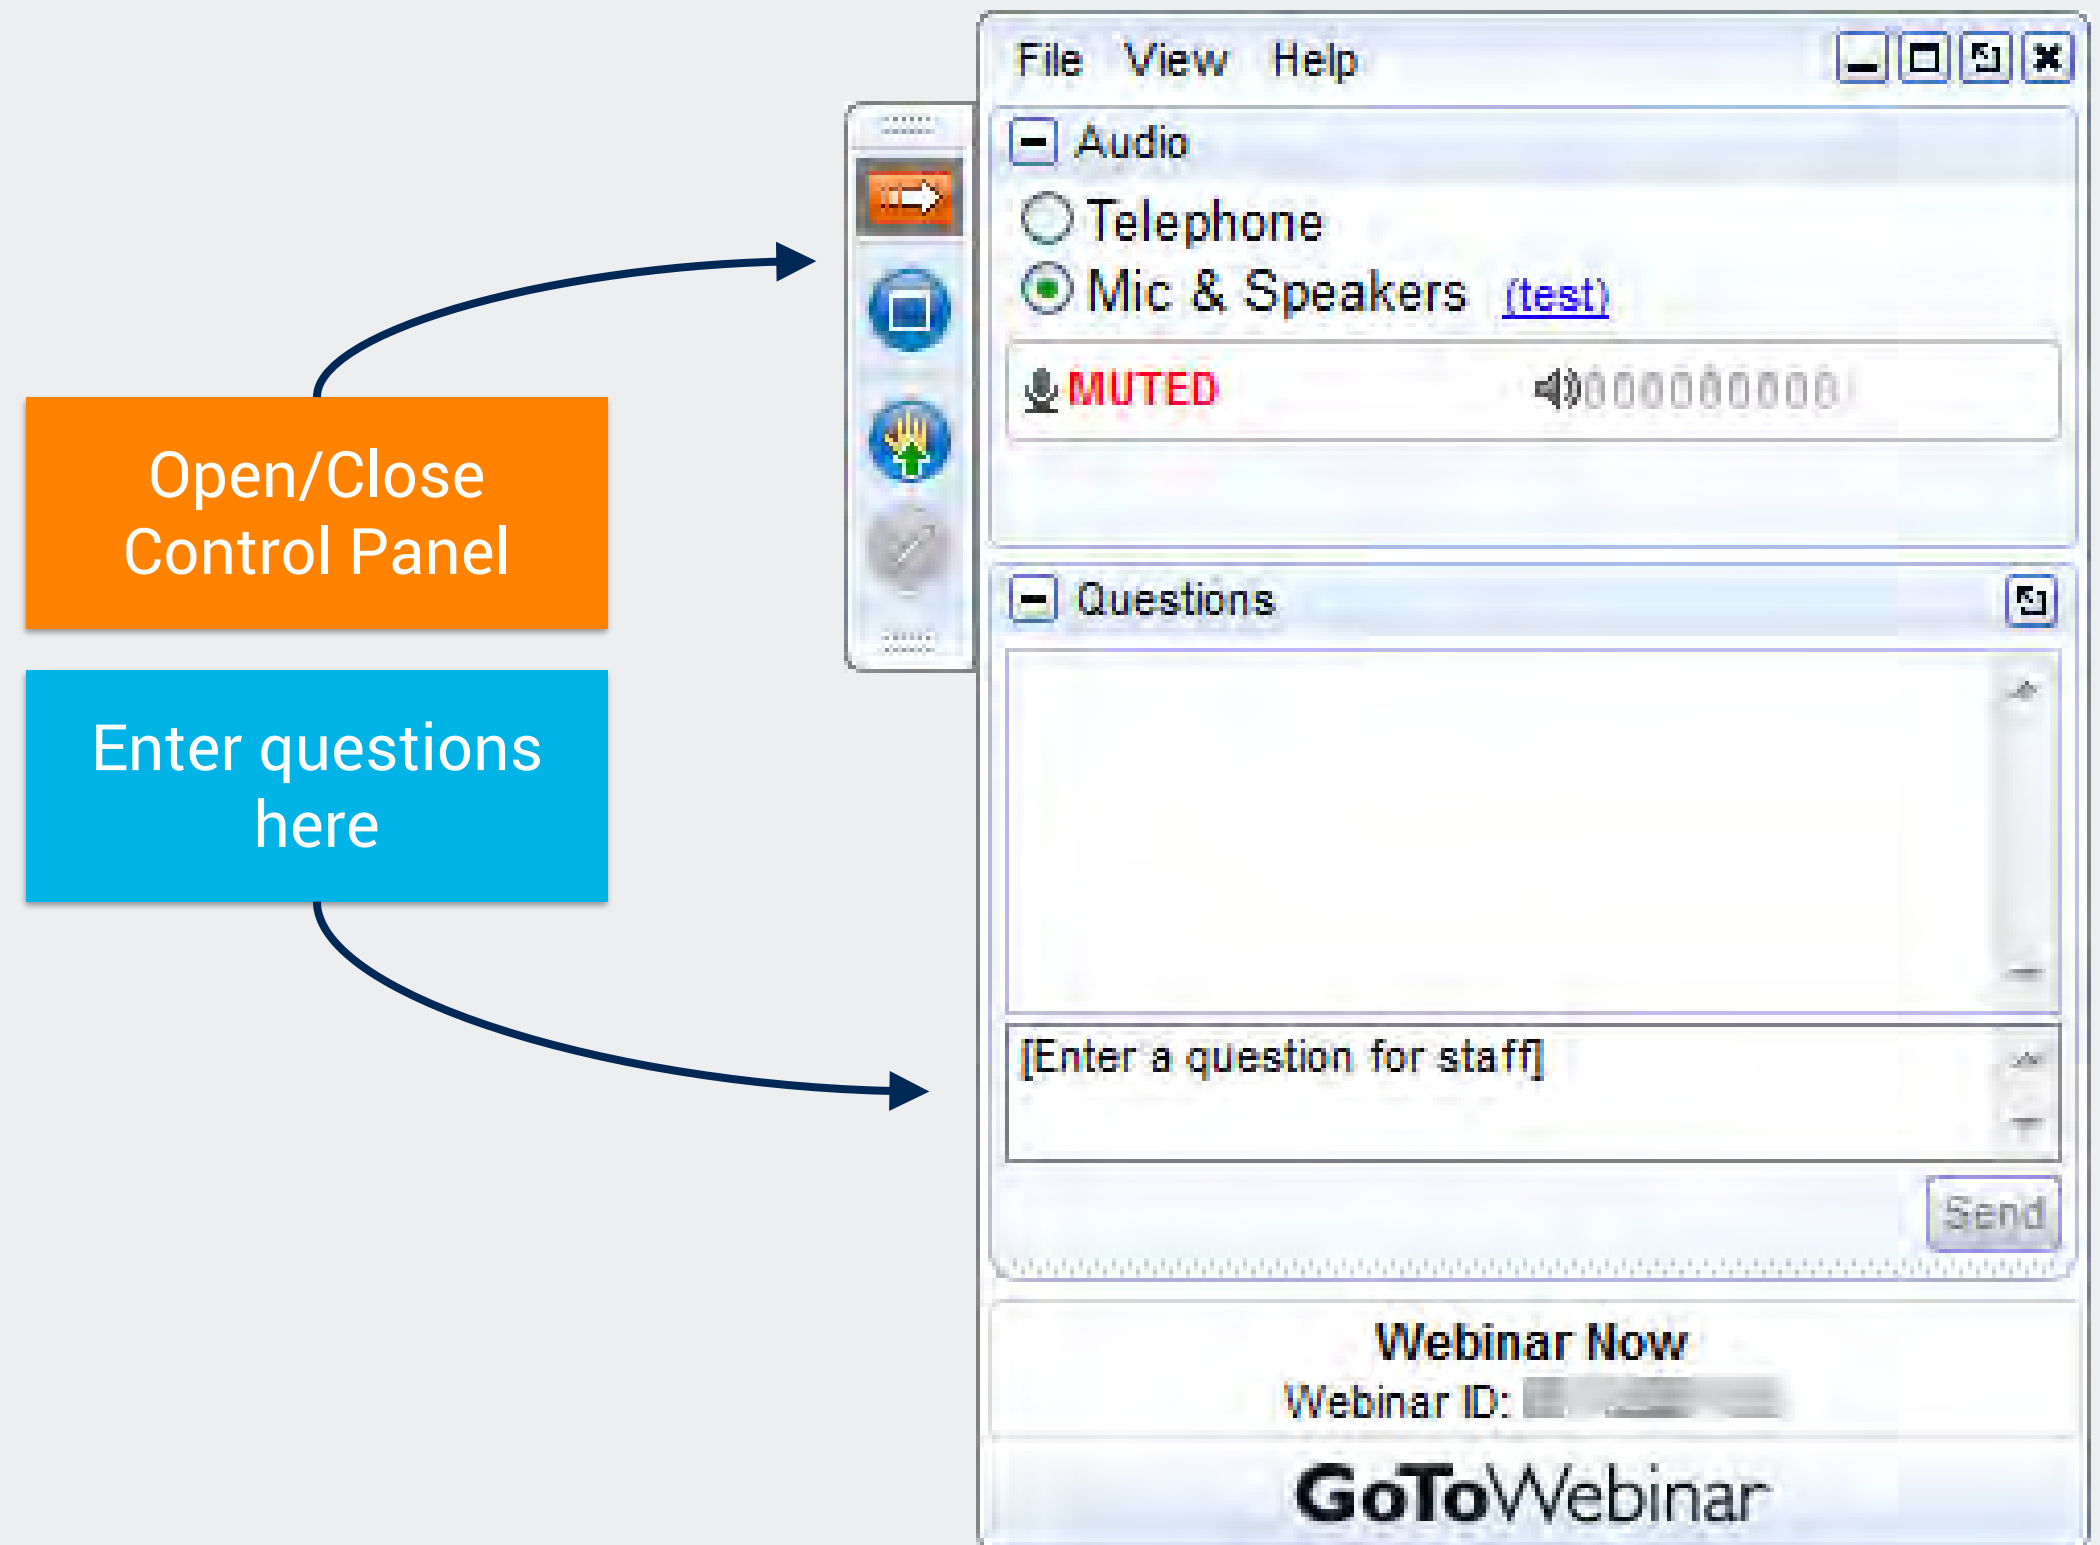

Today's Agenda

- 1 Webinar Logistics
- 2 RM Principles & Best Practices & How They Apply to SharePoint
- 3 RM & Retention in SharePoint
- 4 Labels: Basic Principles
- 5 Q&A

Webinar Logistics

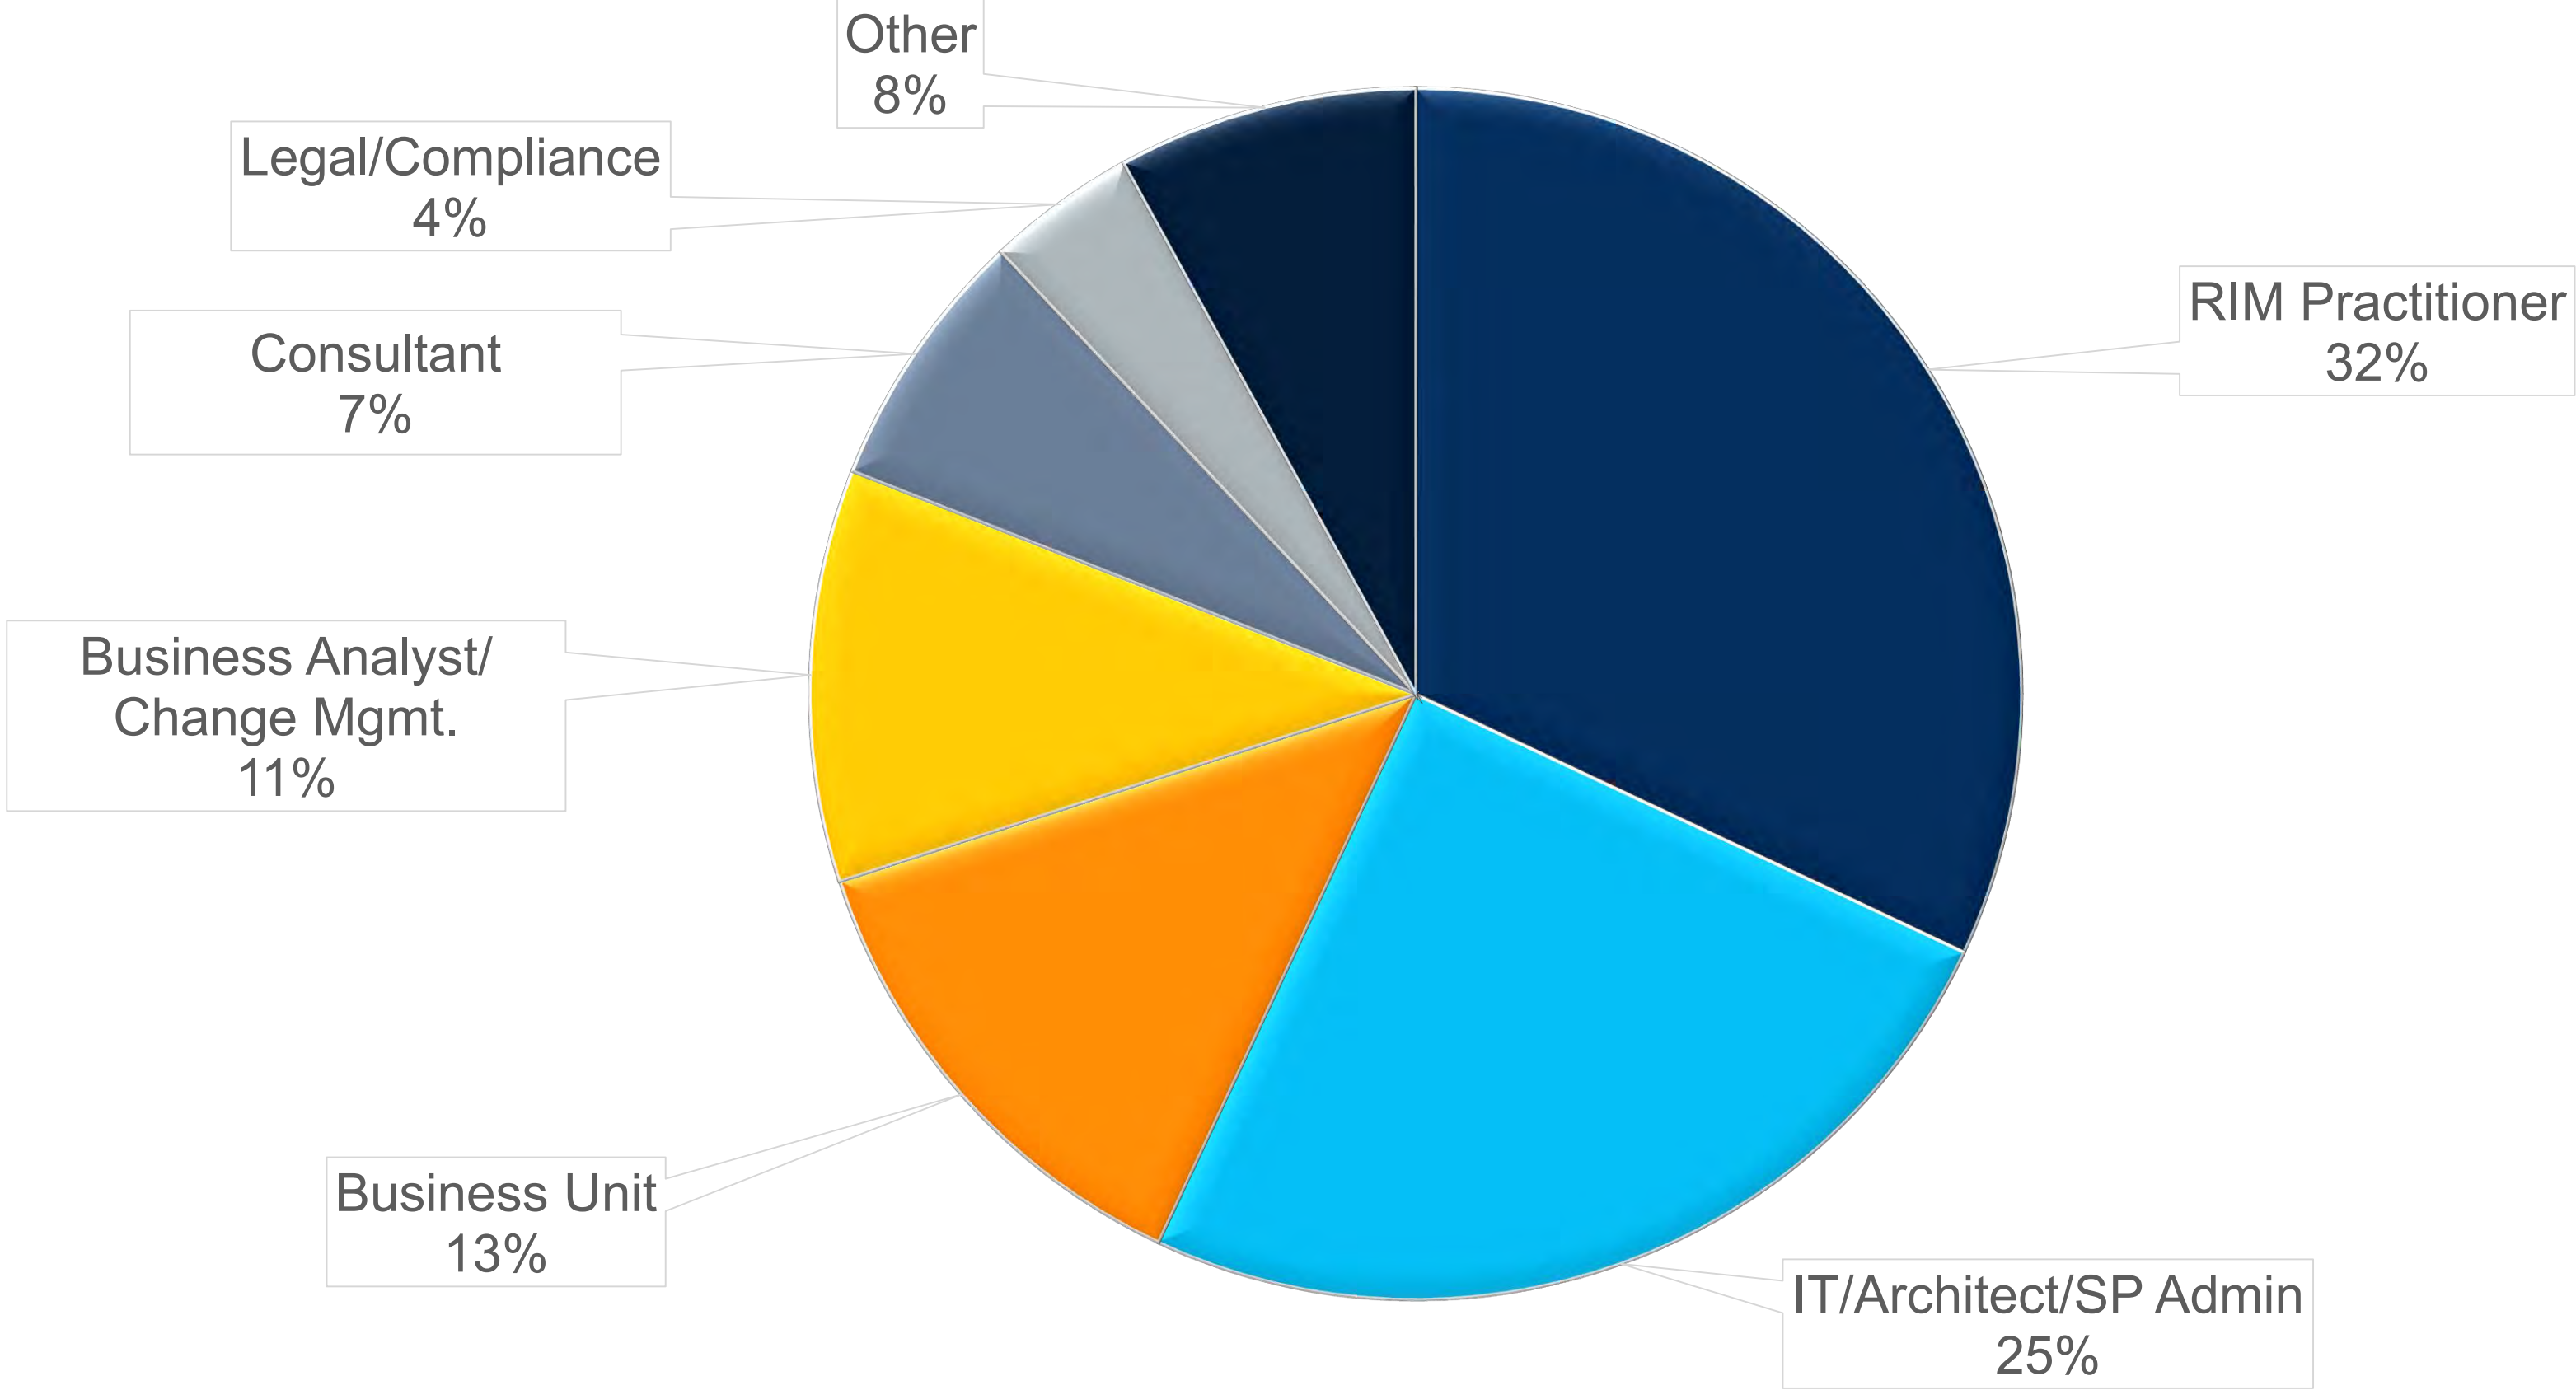

- Today's webinar will last 60 minutes
- You will receive a recording to the webinar
- Enter questions in the Control Panel

Who's here today?

Today's audience by role

Today's Speakers

ROBERT BOGUE

Microsoft MVP,
Principal, Thor Projects

BRUCE HERZER

Director, Colligo

TOM NG

Product Manager, Colligo

Reconsidering Records and Retention

What is a Record?

“Records are both evidence of business activity and information assets”

“Metadata is an essential component of any record”

- Record context
- Record process

Managing records encompasses

- Creating and capturing records to meet requirements for evidence of business activity
- Taking appropriate action to protect their **authenticity, reliability, integrity, and usability** as their business context and requirements for their management change over time.

Record Characteristics

- Immutable
 - Reliability
 - Integrity
- Non-Reputable
 - Authenticity
- Useful
 - Usability

Creating Records

- “the creation, capture and management of records are integral parts of conducting business, in any context”
- Not everything is a record
- Records assignment must be a part of the business process

Manual Tagging

- Must be an explicit part of the documented business process
- When tagging is ad-hoc, nothing gets tagged

Automatic Tagging

- The workflow or business process automation identifies the record
- The item is identified as a record through content analytics

What is Retention?

Systematic, controlled archival and destruction

Why destroy?

- Reduce cost and risk of legal discovery
- Improve search findability

Discovery

- Court ordered protection or release of information pertaining to a case
- Managed as a series of holds
- Holds don't make content a record, but protects it from destruction or tampering like a record

TRAIN SCHEDULE

| TIME | TRACK | DESTINATION |
|-------|-------|---------------|
| 11:08 | E-54 | ST LOUIS MO |
| 11:14 | L-35 | MONTGOMERY AL |
| 11:20 | G-09 | MARSHALL TX |
| 11:26 | J-10 | ALEXANDRIA LA |
| 11:32 | H-75 | CHICAGO IL |
| 11:38 | D-41 | HOUSTON TX |

Retention Schedules

- Specifies the kind of documents and their destruction schedules

Managing Records and Retention in SharePoint

Records

- Records Center
 - Migrate records to a location for storage
- In-Place Records
 - Prevent deletion
 - Prevent modification

Retention

- Set at a content type level
- Set as time from a date
- Multi-stage
- Actions
 - Delete
 - Recycle
 - Move
 - Run a Workflow

Who is the SharePoint Shepherd?

Robert Bogue, aka the SharePoint Shepherd, is a 14-time Microsoft MVP. He makes complicated topics simple and easy to understand. You can follow his blog at www.ThorProjects.com/blog

The SharePoint Shepherd's Guide for End Users

The Shepherd's Guide is an online productivity aid that provides users the help they need, when they need it. At a fraction of the cost of training, your help desk calls will decrease, and your SharePoint adoption will skyrocket.

Get more info by visiting
www.SharePointShepherd.com/Guide.

Implementing Information Management

This online course teaches you how to do information management on SharePoint and Office 365. You'll become an IM expert at your own pace. Use code IIM100 to save \$100 today!

Sign up for the course at
www.AIIM.org/Education-Section/Deep-Dives/Deep-Dive-IIM-SP

What are labels and what is
Microsoft's vision for them?

RM / Compliance Officers

Compliance Officers or IT Administrators, who best understand their business and employees, define a minimal set of simple label options that info workers can use.

Information Workers

Info workers no longer need to know anything about data policies (to know what protection and info governance options to apply and when) and don't need to be tech experts (to know how to apply them).

They just have to choose the right label, and Office does the rest.

Office can auto-detect & auto-apply the right data classification in many cases!

Label Definitions

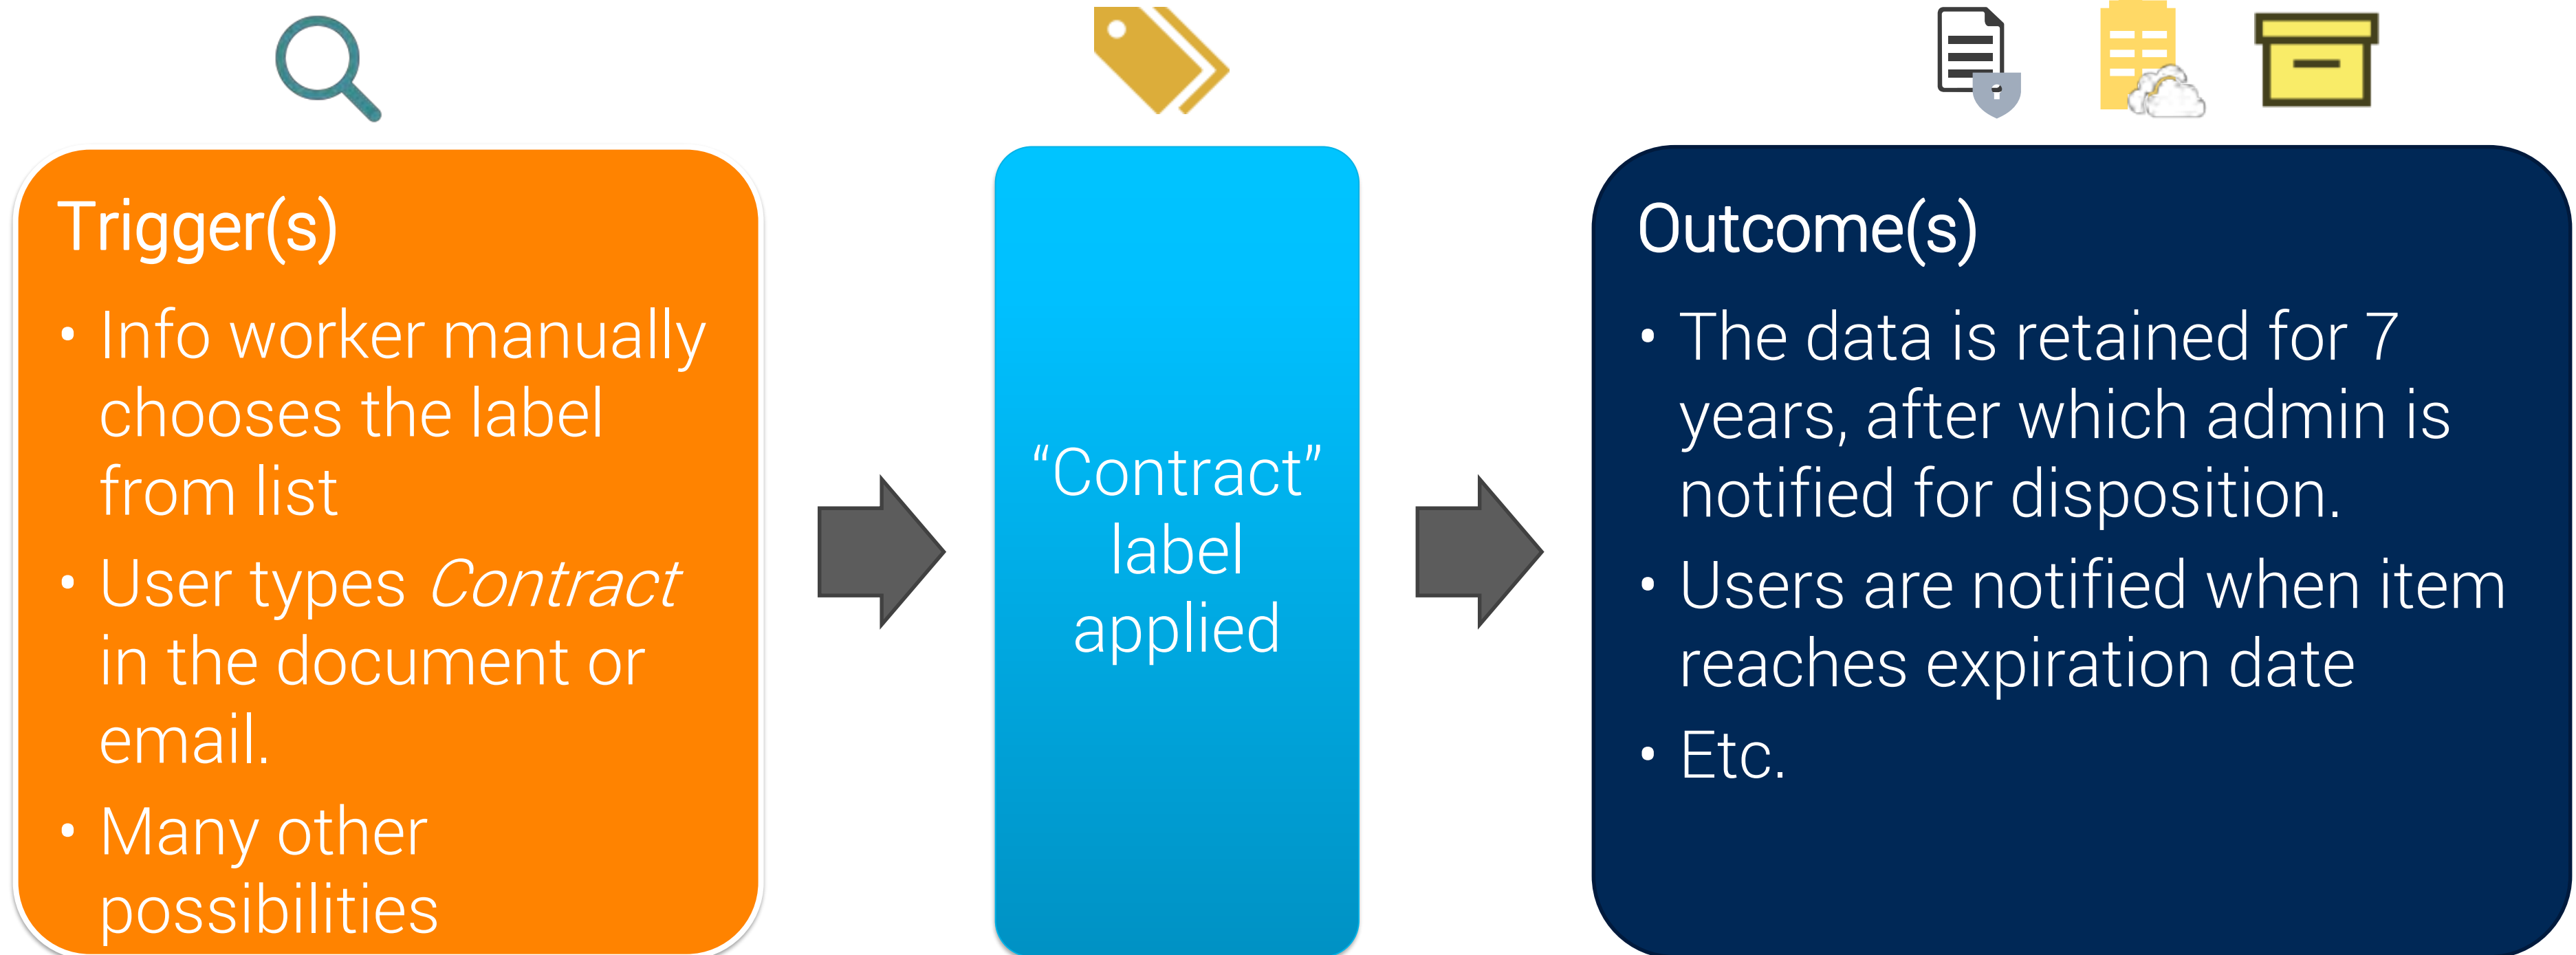

When **RM / Compliance Officers** define labels that make sense for their organizations and industry, they also specify:

- What trigger conditions can cause a label to be **automatically applied**
- What **outcomes** happen when a label is applied

Contract Record Example

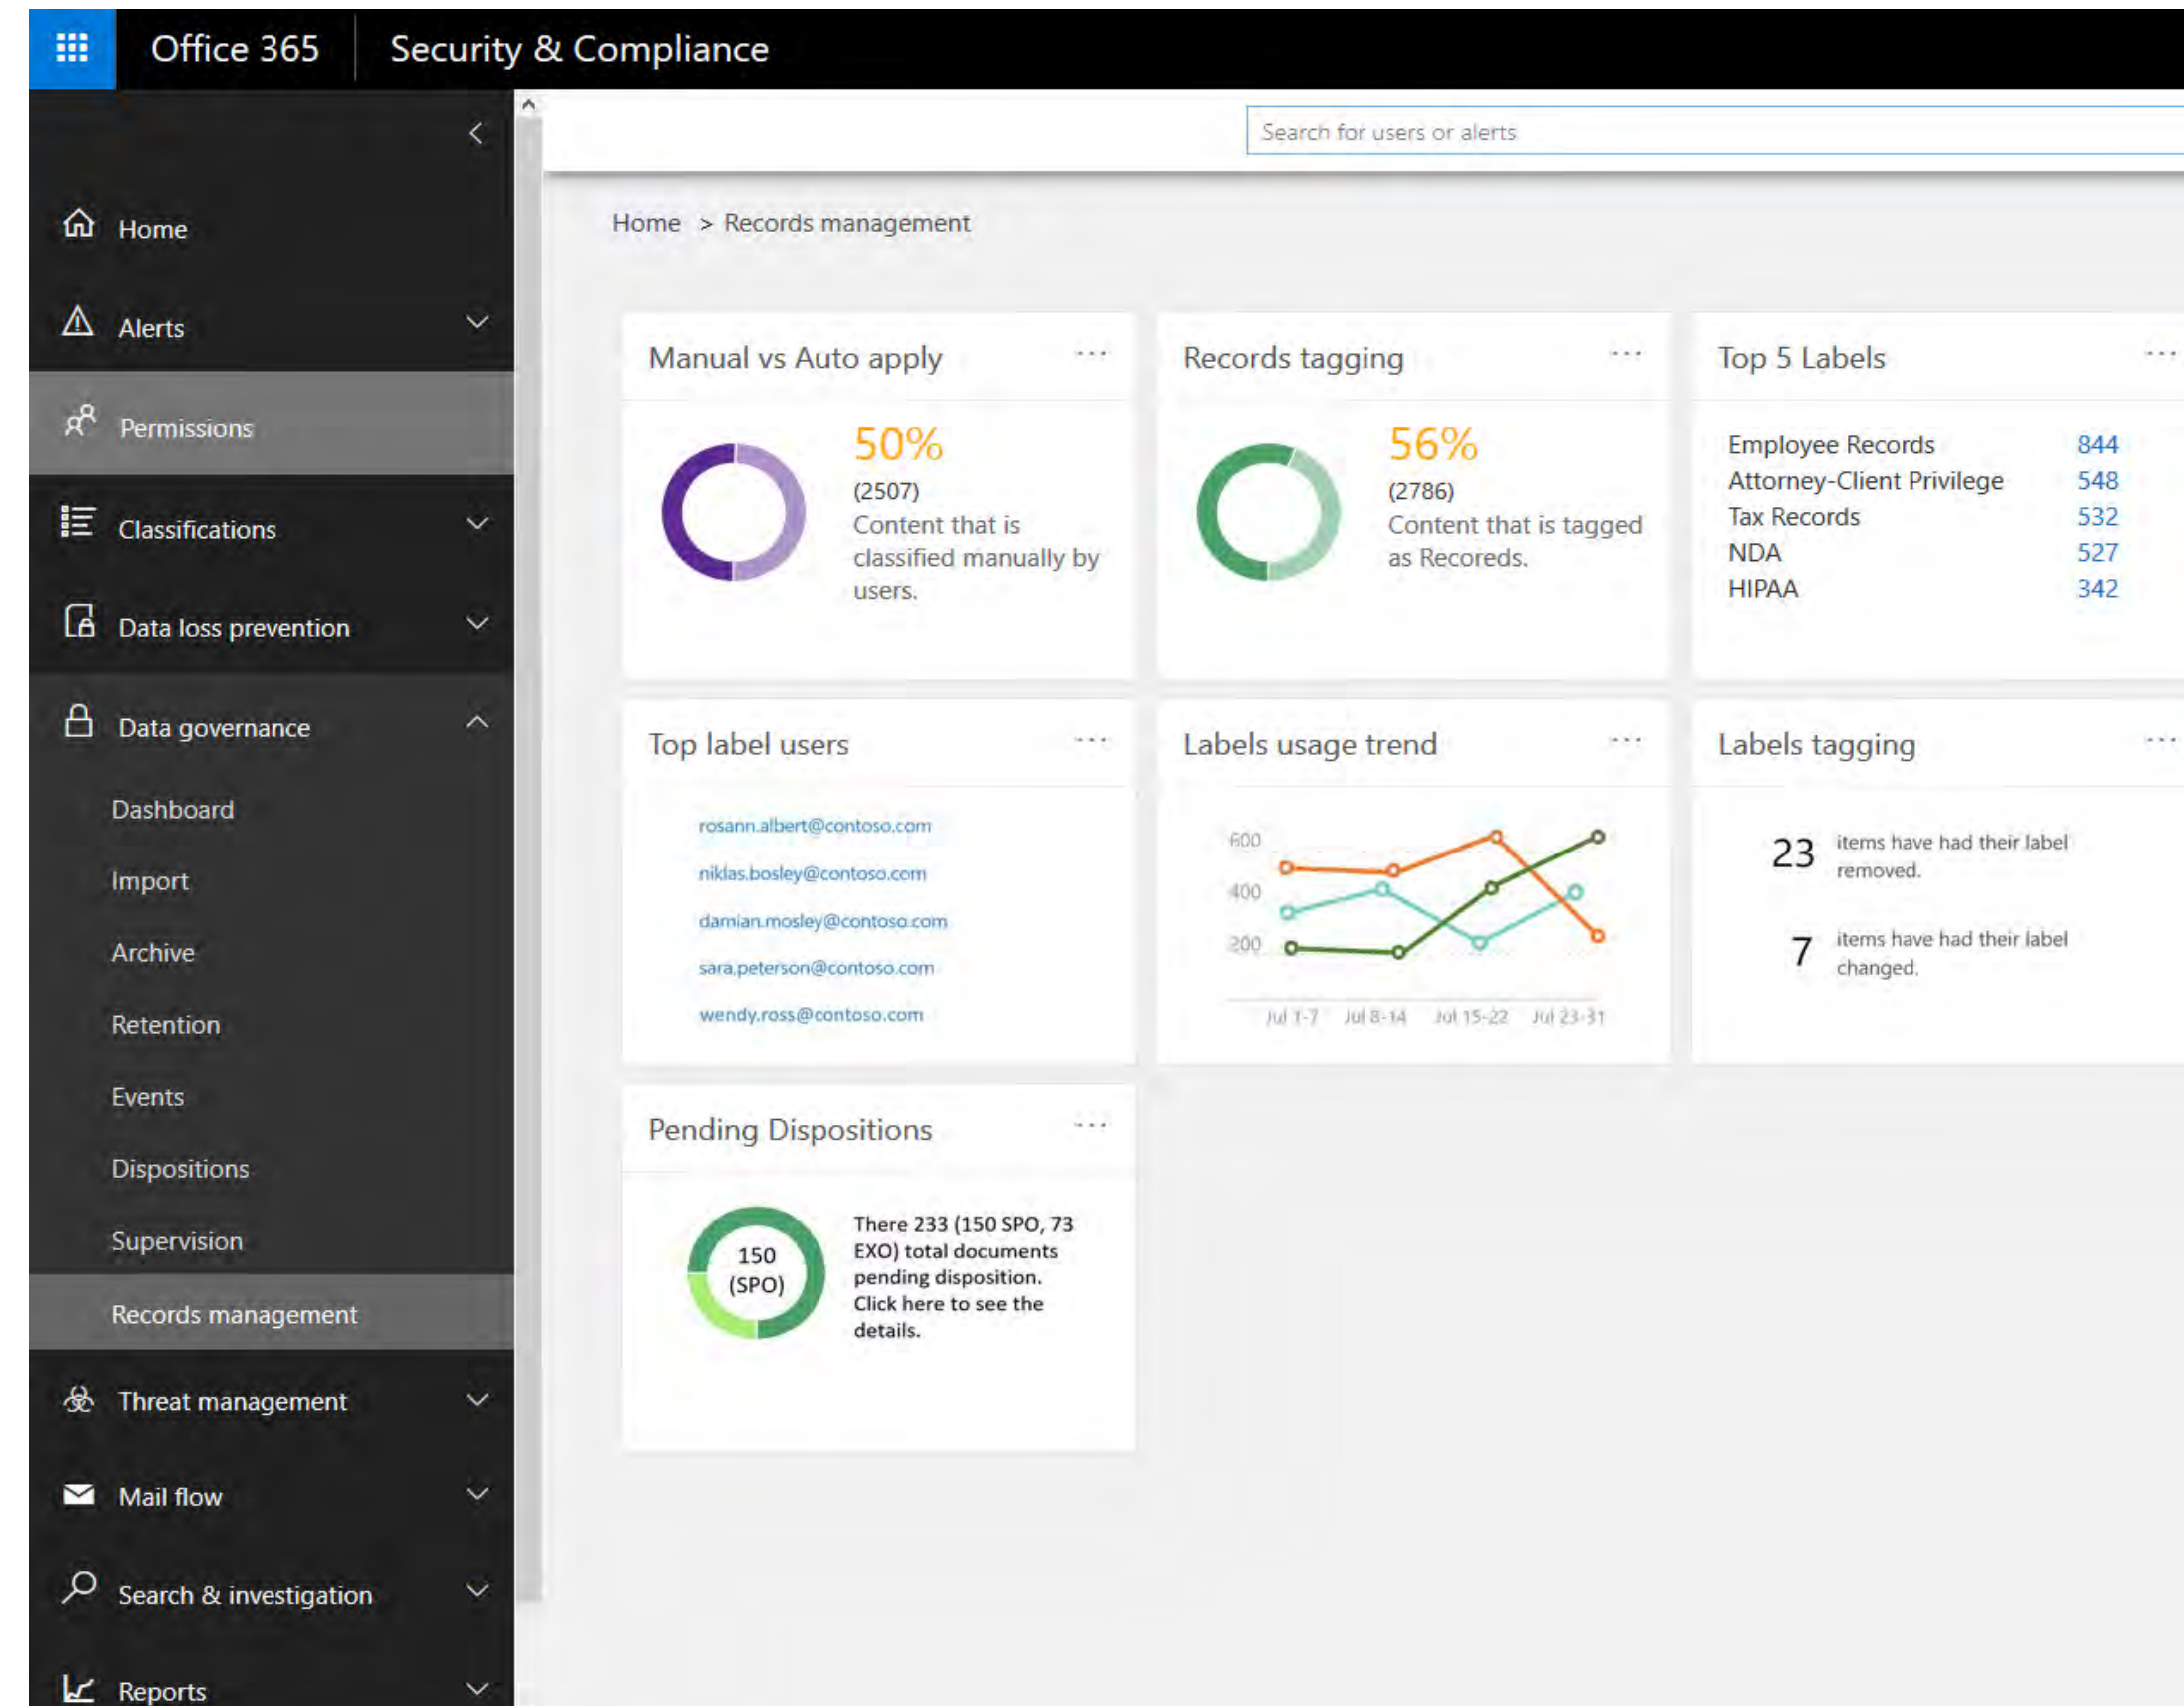

RM / Compliance officers has rolled out a label called “Contract”, configured as shown below.

What is Lifecycle Management in Office 365?

- + Data is automatically or manually classified
- + When data is declared a 'record', it is permanently locked for editing
- + Data is retained according to regulatory and business policies
- + An unbreakable audit trail is created for accountability and eDiscovery
- + Information is disposed automatically or via manual review once the retention period has ended

How are labels and retention policies defined and configured?

Demo

Search for labels

Home > Labels

When published, labels appear in your users' apps, such as Outlook, SharePoint, and OneDrive. When users delete content, when it reaches a certain age, or when more about labels

- Conditions for auto labeling
- Review your settings

Settings for labels applied to content (optional)

The settings on this page are for labels that will be applied to email or docs (automatically or by the user).

Protection

Encrypt labeled items, control sharing, and set up user and admin notifications.

- On
- Block users from sending email messages or sharing documents with this label
- Show policy tip to users if they send or share labeled content [\(Default text\) Customize policy tip text](#)
- Send incident reports in email
- Advanced protection for content with this label [Customize settings](#)

Retention

Retain and/or delete labeled items and classify them as records.

- On
- When this label is applied to content...

| | | | | | | |
|--------------------|---|------------------|---|---|-------|---|
| Retain the content | ▼ | For this long... | ▼ | 7 | years | ▼ |
|--------------------|---|------------------|---|---|-------|---|
- What do you want to do after this time?
 - Delete the content automatically. [\(i\)](#)
 - Trigger a disposition review. [\(i\)](#)
 - Nothing. Leave the content as is. [\(i\)](#)
- Retain or delete the content based on

| | | |
|---------------------|---|---------------------|
| when it was created | ▼ | (i) |
|---------------------|---|---------------------|

Search for users or items

Home > Labels

When published, labels appear in your user apps, such as Outlook, SharePoint, and OneDrive. When you create labels, you can choose to publish them to all users or to a specific group of users. Labels that simply delete content when it reaches a certain age. Learn more about labels.

- Name
- Public

What is Advanced Data Governance?

Advanced data governance enables organizations using O365 to achieve organizational compliance by intelligently leveraging machine assisted insights to find, import, classify, set policy and take action on the data that is most important to them. (Microsoft)

Microsoft's Roadmap for Data Governance in Office 365

Rolling out

- Event Based Retention is now available (April 2018)
- Retention for Microsoft Teams
- Microsoft Information Protection (MIP)

Planned

- Access governance
- Disposition review for email
- General Data Protection Regulation (GDPR)
- Supervision enhancements
- Records Manager dashboard

The screenshot displays the 'Access Governance Site Breakdown' page in the Office 365 Security & Compliance center. The page shows a list of sites with their respective access governance settings. Below the site list, there are two tables: 'Top Groups providing access' and 'Explicit user access'.

Top Groups providing access

| Name | Rights | Users | Active Users | Active Users with access to other groups |
|-----------------------------|------------------------------|-------|--------------|--|
| dlptest Owners | Full Control, Limited Access | 1 | 1 | 0 |
| dlptest Visitors | Read | 0 | 0 | 0 |
| dlptest Members | Edit | 5 | 2 | 0 |
| Alert demo | Limited Access | 0 | 0 | 0 |
| Limited Access System Group | Limited Access | 5 | 0 | 0 |

Explicit user access

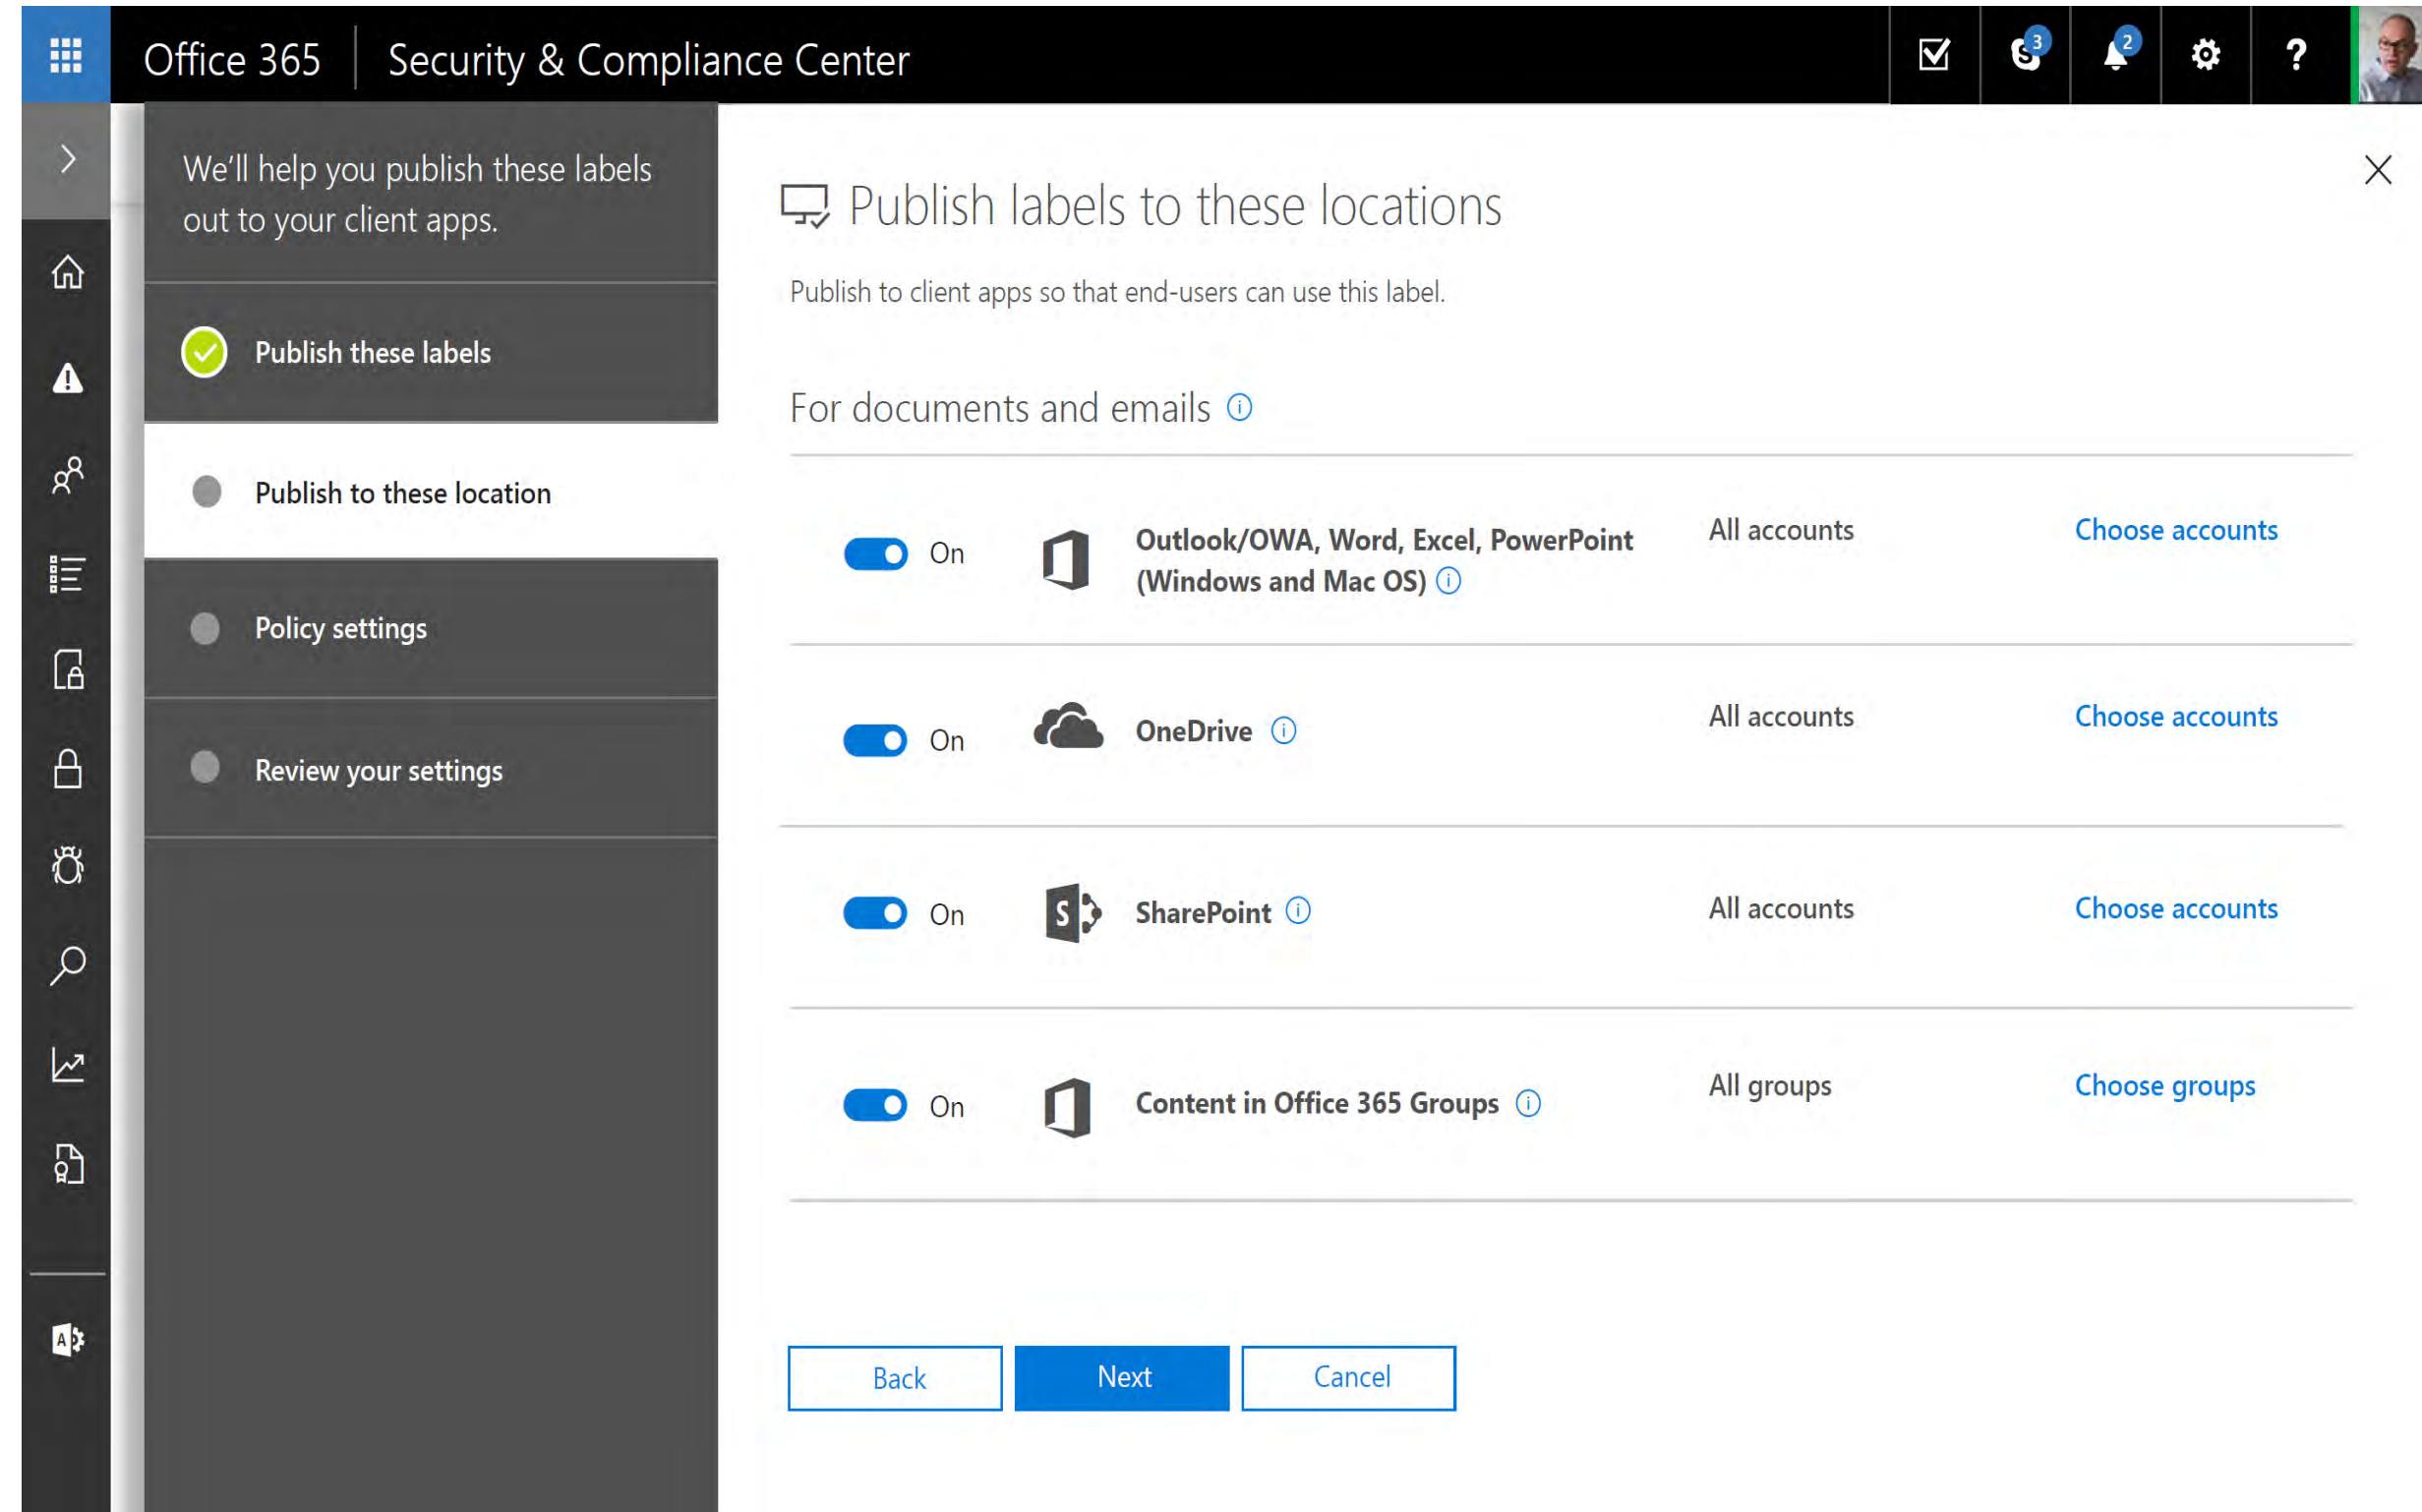

| Name | SPO Groups | Active User | Also has access to site through groups |
|----------------------------|----------------|-------------|--|
| First-run Compliance Admin | Limited Access | Inactive | No group access |
| Alert Tester | Limited Access | Inactive | No group access |
| pradeep ulindala | Limited Access | Inactive | No group access |
| First-run Security Admin | Limited Access | Inactive | No group access |

What kinds of content can labels
be applied to?

Data Governance in Office 365

- ⊕ Labels in EXO, OD, SPO and Groups
- ⊕ Apply Labels in Folders in Outlook Groups, and SPO & OD
- ⊕ SPO Document Sets & Items
- ⊕ Labels in Office

The screenshot shows the Office 365 Security & Compliance Center interface. The top navigation bar includes the Office 365 logo and the title 'Security & Compliance Center'. A sidebar on the left contains navigation icons. The main content area is titled 'Publish labels to these locations' and includes a sub-header 'Publish to client apps so that end-users can use this label.' Below this, there are four rows of configuration options for different client applications, each with a toggle switch set to 'On' and a 'Choose accounts' link.

| Client Application | Toggle | Account/Group Selection | Action |
|---|--------|-------------------------|-----------------|
| Outlook/OWA, Word, Excel, PowerPoint (Windows and Mac OS) | On | All accounts | Choose accounts |
| OneDrive | On | All accounts | Choose accounts |
| SharePoint | On | All accounts | Choose accounts |
| Content in Office 365 Groups | On | All groups | Choose groups |

At the bottom of the page, there are three buttons: 'Back', 'Next', and 'Cancel'.

How do these differ
from/complement SharePoint
properties?

How do Labels Differ From SharePoint Properties?

- + Labels look like properties in SharePoint, but...
- + They are overarching tags visible in all O365 workloads including: Exchange Online, OneDrive, SharePoint Groups, Teams, Excel, Word and PowerPoint
- + They provide a consistent experience for managing content lifecycles

Does this mean everything is a record?
