Colligo Engage

For Email Management

A complete enterprise email management solution.

Usability workers want.
Security you demand.
Control you need.

Colligo Engage is the smartest way to capture emails and attachments in SharePoint.

The mobile content management platform includes apps that delight users while central management controls meet the security and governance needs of even the most regulated organizations.

Whether in the office or on-the-go, employees now have business email apps that keep them productive and compliant.
Re-discover the leading SharePoint integration for Outlook.

Colligo Email Manager for Outlook is the most widely used app for managing emails in SharePoint. Now with even more enterprise-grade functionality like support for larger Site structures, the app is the solution of choice for getting emails and attachments out of inboxes.

- File emails and attachments to SharePoint on-prem, Office 365 Sites or OneDrive for Business without leaving Outlook.

- Enable users to file to SharePoint from anywhere, even when offline.

- Enable automatic or manual classification and control of email records.

- Centrally set policies and monitor records management compliance using Colligo Console.

Colligo Email Manager for Outlook

Key Features:

File

- Natural gestures to file emails and attachments to SharePoint
- Offline filing to SharePoint with auto-upload on sync

Classify

- Automatic tagging of emails with 22 common properties (metadata) plus ability to customize
- Support for managed metadata (taxonomies and keywords)
- Ability to apply different properties to individual emails when filing large quantities
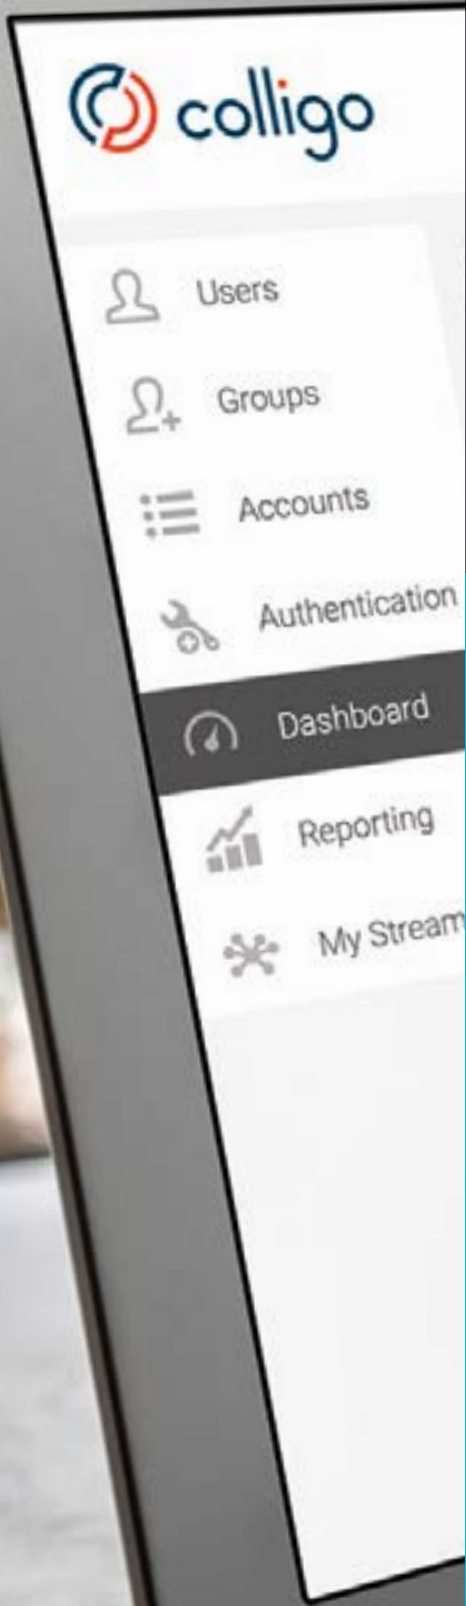

Search

- Advanced search for emails, metadata, documents, images and more, directly from Outlook
- Ability to open or preview SharePoint content from search results in Outlook

Share

- Emailing of SharePoint content as links to facilitate collaboration
- Smart conflict resolution to prevent duplicate content
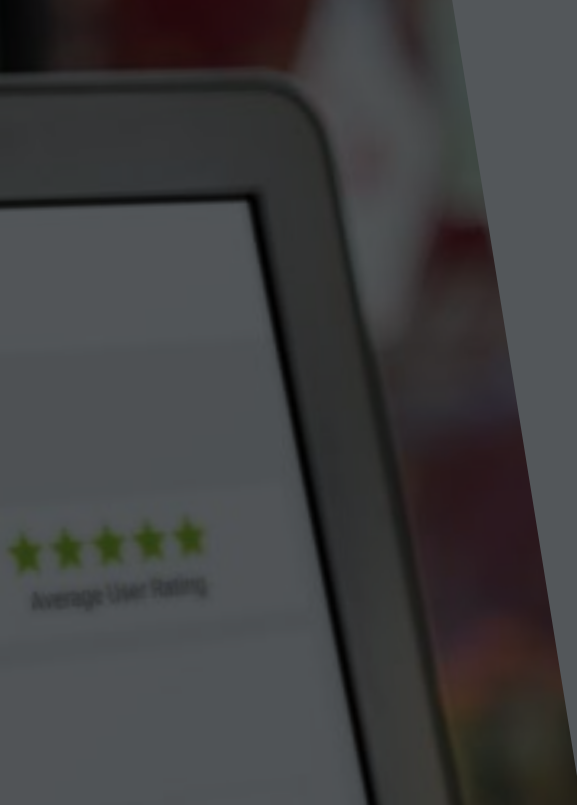

Configure.
Manage.
Monitor.

Colligo Console is the administration companion to Colligo apps. It connects administrators directly to user devices to enable central configuration management and compliance monitoring.

The Console is a service supplied through Microsoft Azure. Content, user and device activity data is collected but all corporate content remains in place on the organization's systems. No content is copied or moved.

Colligo Console

Key Features:

Configure

- Central configuration of app settings such as sync frequency
- Ability to de-authorize devices or users

Manage

- Support for Azure AD and SSO
- Central push of SharePoint locations to authorized users, groups or devices

Monitor

- Detailed user activity logs
- User activity and email management dashboards

colligo

Colligo helps organizations maximize utilization of their core IT systems such as SharePoint and Office 365.

The Colligo email management solution is part of the Colligo Engage mobile content management platform which includes a suite of native apps, multi-system sync technology and a management console. Colligo technology is deployed in F500 enterprises and thousands of organizations of all types to improve compliance, support mobility and mitigate risk.
